(54) OPTICAL RECEPTION MODULE, OPTICAL TRANSMISSION-RECEPTION MODULE, AND MANUFACTURE OF THE OPTICAL RECEPTION MODULE

(57)Abstract:

PROBLEM TO BE SOLVED: To provide an optical reception module capable of being coupled with a single-mode fiber, reduced in the small number of components without providing a branching and optical demultiplexer, small in size and low in price.

SOLUTION: This optical reception module 67 is constituted by installing a 1st optical fiber 62, a semitransmissive type PD (photodetecting element) 64 which transmits part of signal light and absorbs part of it, and a 2nd optical fiber 65 linearly on a mount. An optical transmission and reception module 67 is constituted by connecting a light emitting element to the 2nd optical fiber 65. To use two-wavelength light for transmission and reception, a PD 64 is used which absorbs almost all of received light wavelength and transmits almost all of wavelength of transmit light.

## LEGAL STATUS

[Date of request for examination]

24.05.2000

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number]

3348644

[Date of registration]

13.09.2002

[Number of appeal against examiner's  
decision of rejection]

[Date of requesting appeal against  
examiner's decision of rejection]

[Date of extinction of right]
